

XQuery FLWOR expression

The screenshot shows the 'Template / XPath 3.0 / XQuery 3.0 / CSS 3 Selector / JSONiq Online Tester' interface. The HTML/XML input file is 'auto'. The XQuery expression is:

```
for $x in readingList/book
where $x/bookRead/@read="yes"
return ($x/title, $x/author)
```

The output format is 'ad hoc'. The result of the expression applied to the above HTML file is:

```
1 Fifty Shades of Grey
2 E.L. James
3 The grass is singing
4 Doris Lessing
5 A short history of nearly everything
6 Bill Bryson
```

Query:

for \$x in readingList/book
where \$x/bookRead/@read="yes"
return (\$x/title, \$x/author)

Output:

Fifty Shades of Grey
E.L. James
The grass is singing
Doris Lessing
A short history of nearly everything
Bill Bryson
